

ENGINEERING & PUMPING SOLUTIONS SINCE 1980

Dewatering solutions built around your project.

Pumping equipment, site pipework and related solutions for construction, excavation, groundwater control, infrastructure and drainage applications.

**FADICO INTERNATIONAL FOR ENGINEERING PROJECTS | Mahmoud Fayed
& Partners**

Established in 1980 · New Cairo, Egypt

Solutions for demanding site conditions

Fadico supplies pumping equipment and related accessories for project teams working with water management challenges. Equipment selection should be confirmed against the project's operating conditions and manufacturer technical data.

Construction & excavation

Pumping support for excavation, foundations and temporary site water control.

Pipework & discharge

Discharge pipes, hoses and couplings for site pumping arrangements.

Infrastructure projects

Pumping applications in civil works, tunnels and infrastructure environments.

Typical application areas

- | | | |
|-------------------------------|---------------------------|-------------------------------------|
| • Construction and excavation | • Groundwater control | • Infrastructure and civil works |
| • Drainage and wastewater | • Site discharge pipework | • Pumping accessories and couplings |

For a useful quotation, share the fluid type, required flow and head, solids content, available power, discharge route, excavation depth and expected operating period.

Equipment & product portfolio

The supplied Fadico material features pumping equipment from Tsurumi, Miller and Dreno, together with pipes, hoses, couplings and related accessories. Please confirm model availability and technical specifications with Fadico for your project.

Pumping equipment

Equipment options for project-specific pumping requirements.

Submersible pumps

Submersible pump examples from the supplied photo collection.

Hoses & couplings

Connections and fittings used in site pumping arrangements.

Pipework

Pipe runs and discharge arrangements for pumping operations.

Brands included in supplied company material

TSURUMI · MILLER · DRENO

Final selection depends on flow, head, liquid characteristics, solids, power supply and site conditions. Refer to manufacturer data for verified performance and operating limits.

Real equipment. Real site applications.

The photos below are selected from Fadico's supplied general photo collection and illustrate pumping equipment, discharge arrangements and project environments.
